

BizCAPI™ Offline Surveys

How do you get surveys to those respondents who may be in a remote area with no internet or only have intermittent internet access? We offer a solution with our BizCAPI™ surveys which allow you to publish an offline survey link that, through the utilization of HTML5, lets you collect survey data without an internet connection!

Publishing an offline survey is simple. Just click a button to generate your BizCAPI™ survey link when you go to publish. Once you load up the link onto your device (iPad, cell phone, tablet, laptop, etc.), you then disconnect from the internet and you're ready to go!

You can collect as much data as you like offline. Once you return to a location with internet access, you would then connect back to BizCAPI™ to upload your results to the database with just a click of the mouse. It's that simple!

BizCAPI™ surveys allow you collect data in places you may not have previously had access to:

- ✓ Event Surveys: Collect survey data from event attendees right after the event itself, while the event is still fresh in their minds.
- ✓ Consumer Surveys: Take a survey into a mall or out on the street to collect data, or even to remote villages where internet is scarce.
- ✓ Kiosk Surveys: Set up a kiosk survey at an outdoor trade show.
- ✓ And many more!
